Sean and Davis,

There was a minor sheen to surface water reported after a second grab attempt at sample location SG-B183. This is located at approximately RM 6.3, center of the river. <https://maps.google.com?q=45.581512,-122.757496> see map below.

The crew attempted to deploy spill bmps but it dissipated before they could deploy. It was estimated to cover approximately 2 by 4 foot area when first observed. They notified NRC and OERS per the HASP. For now they have moved upriver and are planning for future contingencies in this area.
